

**THAROS Expands its Patent Portfolio  
CHINA Grants A New Invention Patent**

**SOLVENT-FREE KRILL OIL CONCENTRATION AND PURIFICATION IS  
WHAT OUR READERS ARE NOW WAITING FOR**

Dear friends

The *National Intellectual Property Administration of China (CNIPA)*, recently approved a new THAROS' solvent-free krill oil extraction invention patent.

As you well know, all current krill oils are extracted on-land, from intermediate products manufactured at-sea months before of the oil is extracted, using solvents at some stage of their extraction process. Some concentration models even use solvents that are forbidden on other food processes.

We appreciate so much receiving end-consumers' concerns when it comes to supplement their families with products that have some type of solvents used on their manufacturing process. Solvent residues, although some comply with health regulations, having them is something all of our readers are concerned with.

This new patent reinforces THAROS' commitment to offer end-consumers a fresh, 100% clean, environmental friendly krill oil, a cost-competitive krill oil that is manufactured in less than 2-hours after the krill is fished fresh at-sea.

A model that it is in compliance with strict sustainability and environmental practices. An eco-friendly and negligible carbon-footprint process that takes place where the fishing operation is run.

Answering one of clients' repetitive questions.... yes, our solvent-free concentration and purification model concluded after many and expensive years of hard work, soon both to become part of THAROS' patent portfolio.

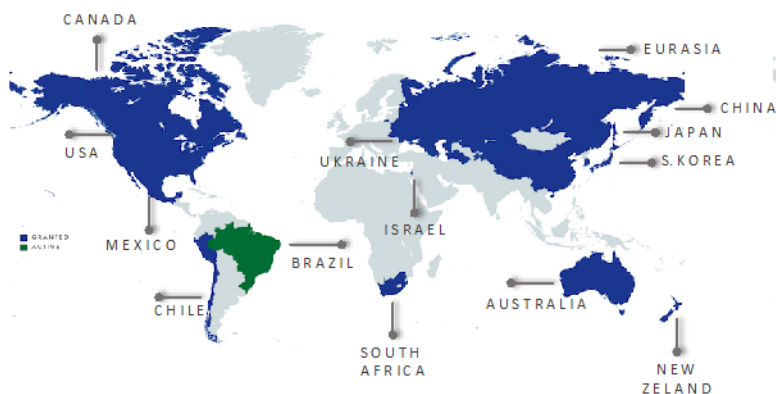

THAROS has extensively informed how solvents residues in krill oils is a matter to worry about. We have published about banned solvents used in several krill oils recalled in South Korea. Read [Korean Health Authorities](#) work, and the [brands](#) involved at that time.

Considering China's vast market, and its growing krill fishing fleet, this new patent is a great business opportunity, as well as a hard enforcement work for us to do. For this same reason we want to thanks the exceptional work done by Tharos' attorneys, [Carey Abogados](#).

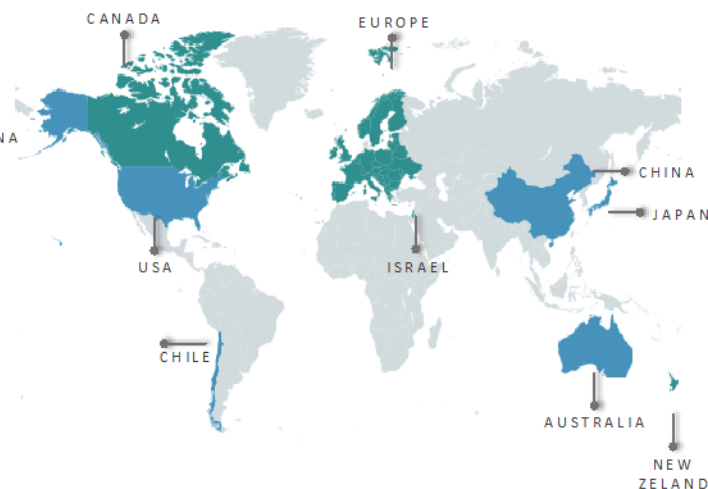

The following map shows current THAROS patent portfolio.
